Stop&Log

Stop&Log is a secure and affordable solution that easily collects and retrofits manufacturing data for a complete efficiency overview

Register and identify stops and downtime

Besides collecting, storing and visualizing data in live and historical overviews, Stop&Log can automatically register and identify any downtime on your production line. Then, it automatically provides insight and statistics for you to optimize on your efficiency and stay tuned on new developments.

The Stop&Log solution is fitted to collect data from various units and doesn't necessarily require one box per machine or unit

Collect data from all units in one overview

Our solution is easy to install and very universal, as it can be used to collect data safely from almost any unit - making it perfect for data collection from especially older machinery. It makes Stop&Log very scalable, allowing you to start small and collect from more units at your own pace. Stop&Log allows you to support your gut feeling,

keep you updated on developments from only one overview, and help minimize stops and downtime with a few simple tools

Our software platform is also easily combined with other infrastructures for e.g. analytical purposes or ERP systems

Automated reports

With the platform you can get fully automated and customized reports for the morning staff meetings

Alarm notifications

You can also get alarm notifications for all types of data to maintain your desired efficiency or output

Case: A Danish manufacturer of health products

A manufacturer of B2C health products wanted to have a general overview with insights to help them understand their productivity better. And with a simple setup of 30 minutes, with a sensor, access to their start/stop signal and our Stop&Log box, they had instant access to all the insights they needed - for a starting price of only €2400 including a year of using our platform

Before

- X Faulty order deliveries**
- X Too much downtime**
- X Delayed updates**

After 1 month

- ✓ Visualizing all downtime**
- ✓ Increased productivity by 15%**
- ✓ Expanding setup to full factory**
